

Project Overview

Project Title: CineCritic+ - A Secure Movie Rating Management System

Overview:

CineCritic+ is a secure backend-powered web system that allows users to register, log in, and manage a movie catalog through RESTful APIs. The system supports JWT-based authentication and includes CRUD operations for movies, category-based filtering, and top-rated movie retrieval.

Project Objectives

- Build a secure and scalable movie rating management API.
- Implement JWT authentication for protected routes.
- Ensure structured code using MVC principles.
- Enable CRUD operations and movie filtering.

Target Audience

- Movie reviewers and content creators.
- Developers integrating movie data.
- Film enthusiasts managing private collections.

Technology Stack

Component	Technology
Backend	Node.js, Express.js
Database	MongoDB
Authentication	JWT (jsonwebtoken)
Middleware	Logger, Validator, Auth, ErrorHandler
UI	HTML, CSS, Javascript
Testing	Postman

Functional Modules

- Authentication Module - Handles user registration, login, and JWT-based access.
- Movie Management Module - Performs CRUD operations on movies.
- Filtering Module - Filters movies by category or top ratings.
- Middleware & Security Module - Includes logger, validation, auth verification, and error handling.
- Database Module - Manages MongoDB connection, schemas, and data storage.
- Frontend Module - Provides simple HTML/CSS forms to interact with the backend.

API Endpoints

Authentication Endpoints

Method	Endpoint	Description
POST	<code>/api/auth/register</code>	Register a new user
POST	<code>/api/auth/login</code>	Login user and return JWT token

Movie Management Endpoints (*JWT Protected*)

<i>Method</i>	<i>Endpoint</i>	<i>Description</i>
<i>GET</i>	<code>/api/movies</code>	<i>Fetch all movies</i>
<i>GET</i>	<code>/api/movies/:id</code>	<i>Fetch movie by ID</i>
<i>POST</i>	<code>/api/movies</code>	<i>Add a new movie</i>
<i>PUT</i>	<code>/api/movies/:id</code>	<i>Update movie details</i>
<i>DELETE</i>	<code>/api/movies/:id</code>	<i>Delete a movie</i>

Movie Filter & Analytics Endpoints

<i>Method</i>	<i>Endpoint</i>	<i>Description</i>
<i>GET</i>	<i>/api/movies/category/:category</i>	<i>Filter movies by category</i>
<i>GET</i>	<i>/api/movies/top-rated</i>	<i>Get movies with rating ≥ 8.5</i>

Roles and Responsibilities

UI Dev - Tejash Raju K V
Backend Lead - Manoj C
Auth Specialist - Sankalp
Tester - Rohan S

Project Timeline and Expected Deliverables

Day	Backend Lead	Auth Specialist	UI Developer	Tester / Documentation
Day 1 - Setup & Authentication	<ul style="list-style-type: none"> - Initialize Node.js + Express structure - Setup MongoDB connection - Create models folder & config files 	<ul style="list-style-type: none"> - Design User Schema - Implement <code>/register</code> & <code>/login</code> routes with JWT 	<ul style="list-style-type: none"> - Design HTML/CSS layout (Register & Login forms) 	<ul style="list-style-type: none"> - Prepare Postman workspace - Verify DB connection - Start Project Scope document
Day 2 - Movie CRUD & Middleware	<ul style="list-style-type: none"> - Create Movie Schema - Build CRUD routes (<code>GET</code>, <code>POST</code>, <code>PUT</code>, <code>DELETE</code>) 	<ul style="list-style-type: none"> - Apply <code>verifyToken</code> middleware - Handle protected routes 	<ul style="list-style-type: none"> - Create AddMovie & UpdateMovie pages - Style basic interface 	<ul style="list-style-type: none"> - Test Auth + CRUD routes in Postman - Log bugs / errors - Update Scope progress
Day 3 - UI Integration, Testing & Docs	<ul style="list-style-type: none"> - Final backend polish - Implement filter routes (<code>/category</code>, <code>/top-rated</code>) 	<ul style="list-style-type: none"> - Refine JWT validation flow - Debug token expiry & protection 	<ul style="list-style-type: none"> - Build ViewMovies page - Connect UI with backend (Fetch API) 	<ul style="list-style-type: none"> - Complete Postman Collection export - Write Reflection Answers - Finalize PDFs for submission
